ESRI
JOSEFSTRASSE 218
8005 ZÜRICH
SWITZERLAND

Software Developer – 3D Geometry (Urban Design)

Dear Recruiter,

About Me

I am Alexander Lelidis, and I'm a 4th year Computer Science student doing my masters degree here at ETH Zurich. I am interested in computer graphics, computer vision and security. However, I am really open to other things as well. In my free time I like to ski and do art.

Why Esri?

I am currently working in a small start up associated with ETH research doing geo-spatial-analysis and visualizing big geo data. During this process I kept constantly bouncing into Esri either from the computer graphics side with the procedural cityEngine or from the geo perspective with the Esri tile layers. The connection of visual pleasing representation with big geo data created a great interest and lead me directly to Esri.

Why Me?

I have great enthusiasm for Esri and I am looking for work on great projects with a professional team. I think one of my strong suits is that I learn rather fast so adopting new workflows and methods should be done in no time.

Sincerely,

Alexander Lelidis
